

**If you have noticed errors in sections that are not described in the manual, please record them as well.**

Every time you find a mistranslation or other error on the db-bet website, take a screenshot to document the problem.

Make sure the screenshots clearly show where the error occurred and provide context to help developers quickly identify the problem.

Don't forget to add a proper description to your screenshots, specifying the page, language, text elements, and steps to reproduce the bug.

#### Step 1: Understanding db-bet Website Functionality

Carefully review the website's description, functional requirements, and main elements of the user interface. Familiarize yourself with the expected translation and the site's language.

#### Step 2: Checking the Global Menu

Open the website's homepage and check all elements of the global menu, such as "Home," "About Us," "Contacts," "Services," etc. Ensure that each menu item is displayed in the correct language, and that clicking on them navigates to the respective pages correctly.

#### Step 3: Checking Content Translation

Visit each page that can be loaded on the website and check the translation of textual elements, such as headings, paragraphs, buttons, image captions, etc. Pay attention to language, spelling, and grammar to identify possible errors.

#### Step 4: Checking Forms and Input Elements

Inspect all forms on the website, such as registration, login, contact forms, and other feedback forms. Verify that the labels for input fields, error messages, and other text elements related to forms are translated correctly.

#### Step 5: Checking Notifications and Messages

Perform various actions on the website to trigger notifications and messages, e.g., successful registration completion, input data errors, etc. Ensure that all notifications and messages are translated accurately and displayed in the correct language.

#### Step 6: Checking System Messages and Errors

Simulate incorrect actions, e.g., using an incorrect URL, accessing disabled or unavailable pages, etc. Verify that system messages and errors are displayed with accurate translations and informative texts.

#### Step 7: Checking Text Links and Buttons

Navigate through all text links and buttons on the website. Ensure that they are translated into the appropriate language and accurately reflect their functionality.

#### Step 8: Checking Footer Translation

Scroll down each page to the bottom to view the content in the footer. Check that footer texts, such as "Privacy Policy," "Instructions," "Terms of Use," etc., are translated into the correct language. Ensure that links to pages with terms and instructions work correctly and are translated appropriately.

#### Step 9: Checking Bonus Translation

Review all offered bonuses on the db-bet website, such as welcome bonuses, loyalty rewards, promotional offers, etc. Verify that bonus descriptions and terms related to obtaining and using them are translated into the required language. Ensure that all bonus rules and restrictions are clear and accurately translated.

Include a detailed description of the issue, specifying the affected pages, texts, languages, and the steps to reproduce the problem.
